Chief Complaint:

Right ankle pain.

History of Present Illness:

This a very pleasant 23-year-old African-American female 27 week pregnant who was restrained driver involved in MVC earlier this morning when a car pulled out in front of her causing her to hit them head-on. There was positive airbag deployment but no loss of consciousness. She noted abrupt onset of right ankle pain following the accident. Other than bilateral wrist pain she denies pain elsewhere.

Right ankle pain is exacerbated by palpation or motion and alleviated by rest.

Abdominal ultrasound demonstrates no free fluid and no evidence for abruption or retroplacental hematoma.

Past Medical History:

27 weeks pregnant.

Past Surgical History:

Past Surgical History: No Previous Surgical History

Physical Exam:

Constitutional: Well developed, well nourished; No acute distress

Cardiovascular: Regular rate and rhythm

Lungs: Respiratory effort: no intercostal retractions or use of accessory muscles

Skin: No rashes, lesions or ulcerations

Musculoskeletal: Inspection of the right ankle demonstrates ecchymosis and swelling over both the medial and lateral malleoli. There are superficial abrasions over the knee but she is nontender about the knee and midfoot. She is able to move the toes without pain or difficulty and reports intact sensation to light touch of the dorsum and plantar surface of the foot. Her pedal pulses 2+

Mental Status: Oriented to time, place and person

X-Rays/Diagnostic Studies Reviewed:

Xray Right ankle film/study reviewed Comminuted bimalleolar ankle fracture with displaced medial malleolus. No dislocation.

Date of Service: Dec-10-2022

Assessment and Plan:

Impression:

Closed right bimalleolar ankle fracture.

27 weeks pregnant.

Plan:

Reviewed the diagnosis, imaging findings and treatment options. We have discussed ORIF of her right ankle fracture.

Currently, she is too swollen to proceed with operative repair. She indicates that she has stairs to navigate at home and has concerns about pain control. Her obstetrician has agreed to admit her to the hospital.

She should remain nonweightbearing to the right lower extremity and the leg should be elevated above the level of the heart.

She has been placed in a well-padded posterior short leg splint.

Physical therapy evaluation.

Pain control per OB.

Will monitor swelling and schedule operative repair once soft tissue swelling allows. The patient and her mother understand that this can take a week or longer and that she can be scheduled as an outpatient through the PSO.

She does not need to remain in the hospital until her swelling diminishes.

Will continue to follow her and monitor her swelling while she is hospitalized.

normally (I) all, works from a desk for Steward health.
Pt is 5'0"

Objective Findings:

BED MOBILITY: mod(A) supine<>sitting R side edge of bed, pt has not even attempted mobilizing up to this point, R leg is elevated and supported on wedge.

TRANSFERS: Attempted sit<>stands multiple times with cues for hand placement and setup, pt too painful on L wrist, has to lean on forearm and once she does achieve standing she is unable to place all her weight on L foot to pivot or tolerate moving walker.

GAIT: unable

COGNITION: A&O, appropriate

PAIN: L wrist, ribs, chest and R ankle

ROM: guarded R knee flexion due to pain, R ankle posterior short splint in place.

STRENGTH: pain limiting al 4 extremities

BALANCE: impaired postural reactions, static sitting SBA, static standing min(A)

VITALS: WNL room air, pt states she feels more contractions.

AMPAC Basic Mobility

Turning to Side: 3

Supine to Sitting: 2

Bed to Chair: 1

Standing Up:1

Walking in Room:1

Climbing Stairs:1

Total Score: 9

(Scoring Reference Range: 6/24 (dependent) to 24/24 (independent))

Assessment: Patient is pleasant and very cooperative, her mother is present and supportive and very worried as pt would be alone and she is currently unable to tolerate mobilization. Recommend pt continue inpatient PT and work on functional transfer tolerance. Discussed with charge RN. Pt requires ongoing skilled PT in order to regain strength and restore functional mobility.

Treatment Minutes: 30 minutes plus eval, see above

At conclusion of session, pt remains in bed, alarm on, all needs in reach

Charges Addressed?

Predicted Frequency and Duration of Therapy Intervention (PT Eval)

3x/wk, RA 10th (freq adjusted as pt to stay for surgery)

Anticipated Equipment Needs at Discharge (PT Eval)

NWB R LE, 27 weeks pregnant: fetal monitoring, fall TBD, likely needs BSC, FWW and wheelchair.

Anticipated Discharge Disposition (PT Eval)

home with assist; home with home health; when goals are met, pt unsafe at this time for return home

Goal 1:

Pt will demo supine <-> sit mod[I] for safe functional mobility

Goal 2:

Pt will demo sit <-> stand and bed<-> chair/BSC with RW with mod(I) for safe functional mobility.

Goal 3:

Pt to ambulate at least 25' FWW mod(I)

Goal 4:

Pt to perform one FOS, seated position with min(A). PT treatment completed.

Today's Treatment

Updated Hospital Information: RN Summer clears for session, removes fetal monitor. RN reports pt likely to stay until ortho surgery completed.

Objective Findings:

BED MOBILITY: Pt in bed with R LE elevated on wedge. Min(A) supine<-> sitting R side edge of bed, pt requires most assist for R LE support.

TRANSFERS: Worked on sit<-> stand transfers with L platform walker with min(A)x2, pt able to bear slightly more weight onto L leg this date but unable to hop or pivot due to R LE pain, stays forward flexed at the trunk. Worked on modified pivot transfers bed<-> BSC that was adjusted for pt height with min/mod(A)x1, pt sits on commode but keeps R leg elevated on the bed due to pain with leg in dependent position.

GAIT: unable

COGNITION: A&O

PAIN: 9/10 R LE, increased with mobilization. Pt with L wrist and L knee pain, chest/rib pain with weight bearing thru the arms.

ROM: R ankle with posterior short splint

STRENGTH: Pain limiting L wrist and L knee with associated swelling and bruising.

BALANCE: impaired postural reactions

MRN: H000557209
Visit: H2234400174
Age: 23y (May-16-1999)

WILSON, ASHIYAH
Gender: Female

Holmes Regional Medical
Center
Current Location:
HR-LB-B404

Assessment: Patient continues to be limited by significant pain and edema/bruising. Pt is unsafe to return home alone. Pt requires ongoing skilled PT in order to regain strength and restore functional mobility.

Treatment Minutes: 24 minutes, see above

At conclusion of session, pt remains in bed, R leg elevated, all needs at hand, RN updated, recommended pt continue use of bed pan for urination but could use BSC for BM.

Charges Addressed?

Yes
